

**NOTICE OF POTENTIALLY LIMITED AVAILABILITY OF  
FRESH WATER SUPPLY AND SEWER CAPACITY  
TOWN OF WEST YELLOWSTONE, MONTANA**

On January 19, 2016, the Town Council of the Town of West Yellowstone authorized the Town Engineer and the Public Works Superintendent to conduct a study on the Town's fresh water supply in order to determine whether or not the Town had sufficient supply available to serve any new hook ups, either residential or commercial. Further, the Town Council authorized the Engineer and Public Works Superintendent to proceed with the necessary applications to expand the capacity for the sewer system in the Town.

Until such time as the study is completed and the new discharge permit received, the Town is unsure of the physical availability of a fresh water supply for any new buildings or additions to existing buildings or of the capacity of the sewer system and strongly urges anyone who is considering building or remodeling to contact the Town to discuss the water supply availability and sewer capacity before any plans are made.
